

Benefits of the new / optimised line 2

- the line is suited to produce the smaller capacity at all stages (200-800 kg/uur)
- The retention time in the steam mixer is now like in practice (8-60 sec)
- The operator/ client is controlling the retention time (50-500 sec) of the mash
- The pelleting process is suitable for experimental diets as well as technological tests
- Cooling as well as drying is possible when producing pet food or aqua feed.
- Advanced steam dosing with sensors for steam quality and flow measuring
- Flexible process and more treatments per day are possible in an experiment
